

22.8 24.8 1 mm wide Sporosmilla?

29.8 1 mm wide Sp. 4 ER Sp. 50 x 9-10

so likely intermedia ✓

13.9 Conocharta 8-sp Setae ± over all of
upper half. Sp. discoid 12-13 x 9.5-10 x 5-6
ca 30-35 long. Ascii 110 x 14 lymnaea ✓

Sp. 4 ER 43-45 x 6.5-7 oblique g. SWS

anthesis ✓

T. Stenoma polyzona brambish excipulum

Sp. 4 ER 51-52 x 9 intermedia ✓

Schizothecium taraxacum 4-sp 19-20 x 11.5-12

well developed Scales

26.9 Hypocrea large, 2 lined 1-floccid stromata,

with grey tomentum. 1 mm wide indocelia

of basal 'cell' in the few immature spores seen
- ca. 20 x 10

Pre deep blue in KI

Small 8-sp. Schizothecium sp uniseriate
 16 x 8 small scales fragment
verticalis

Coniochaeta 8-sp. short scattered scales
 sp 12-13 x 8 x 5-6 lignaria ✓

Sp. 4 ER 48-57-58 x 9.5-10 intermedia ✓

T. polysporus (uniseriate) ✓

3.10 Hypocypria asci 240 x 19.
 Spores broad rounded ellipsoid 21-22.5-23 x
 12.5-13
 g. slit 11.2-12.8-13  uniseriate

'Second cell' only visible in many asci, as
 a slight birefringence at basal end of spore
 plug bright blue in KI. 9-9.5 x 6-6.5,
 "champagne cork"

brefeldii

Sp. intermedia ✓ Sch. leucosporum ✓ Con. lignaria ✓

Sch. 8-sp. per scales uniseriate unispored
 asci 12.5 x 12 sp 16 x 9-10 vesticula ✓
 leading to form vertical line?

Dried 3 Oct 2008 with Hypocypria Coniochaeta
Sporium Schizothecium
