

N44.1016; ~~N~~7.4744. 2280 m. 26.8.08. Incubated 10.11.08. Parc National du Mercantour 'Micoblitz'. 250A

10.11 - 13.11 - 17.11

Aspidobius immersus ✓ immature

Pilobius small species 50 gran ✓

spores orange 11-11.5 x 5-6 kleini?

20.11 Asc. immersus ✓

Schizobolus 8-sp 22.5-25 x 12.5-13

uniseriate good Scales around ostiole,

scarer → smaller below

conicum ✓

27.11 Coprinus Lanatuli 4 sp 11.5-14 x 6.5

radialis ✓

Saccobolus repandus 3+3+2 sm 27-30 > 9

Sch. conicum ✓

Coprinus sexdecimsporus ✓

2.12 Coprinus schlotzi no cystidia. 4-spored

sp. 8-9 x 4.5 ± apical sp

pellucidus ✓

Sch. conicum ✓

Cop. sexdecimsporus ✓

11.12 Cop. radialis ✓

Cop. pellucidus ✓ Sch. conicum ✓

Sch. vestricola ✓ poor Scales, smaller spores

19.12 Sch. vesiculata ✓ Cap. pellucida ✓

30.12. Agaric form extensive white mycelium
Campanulate peridium, whitish ± floccose stem
reddish cap with white margin.
Laminate white. No faint periphyses?
no basidia or spores yet.

Agaric / Psathyrella / Psathyra ?? Wait for spores

3.1.09. Basidia no myc. Cap not fully
expanding Spores blackish
broad ellipsoid ST. Lineariform angular

12.5-13 x 8.5-9.5

Ps. coprinata

10.1.09 Psathyra ✓

Cap white peridium.

13.1. Cap expanded to 24 high x 12 mm wide.
Sluggish hyphal veil - not sphaerocystic. Looks as if
there will be a ring. Stipe 6 cm long x 10 mm wide,
swollen below, fluffy mycelial base.

15.1 Spores ellipsoid 16-19.5 x 10.5-12.5

Large off-center g.p.

Stropharia

(H)

20.2.09 Discarded - poor condition, nothing new.
