

6.3 - 11.3 -

17.3 plant-fri white conical/phanolite mycelium

24.3 Schizotremium f.sp. uniseriate 14.5-16 x

Small 'scales' - no pattern of organization ⁸⁻⁹

Asci 160-175 x 16

cf. vesticaria ✓

Atractia sp. v. similar, but with a tendency for scales in vertical lines + branched

spores in clavate ascus

→ Atractia sp. with polyseriate asc' 145 x 30, wider @ middle. Spores 128 or less -

spore meas. 105 x 22. Spores ellipsoid-diskoid

no apical ages or pedicel 6 x 3.8

no gel, no peridium no pare? cf. Sordaria polyseriate ✓

Asci apex KI-ve

4.4 Schizotremium f.sp. uniseriate poor scales.

sp. 16 x 10.5 19 x 9.5-10
-17.5

cf. vesticaria ✓

11.4 Schizotremium ✓ f.sp. uniseriate 14.5 x 9.5

Atractia sp. details of spores

22.5 - 25.5 x 14.5-16

Oligospora abundant.

18.4 Schizothecium ✓ S. sp 16 x 9.5 uniseriate

divid. h. w. hidden under Asporangia

27.4 Schizothecium S. sp uniseriate 16-17.5 x 9.5

small poorly developed scales.

Sporangia 4 ER 51.5-54.5 x 9.5

asci 180 x 22

interior ✓

8.5. Descender - pod condition
